

## 50. Pow(x, n)

---

题目描述: <https://leetcode.com/problems/powx-n/>

实现pow(x, n)函数。

解题思路:

二分法

if  $n \% 2 == 0$  return  $\text{pow}(x * x, n / 2)$

else return  $x * \text{pow}(x * x, n / 2)$ ;

代码1:

```
class Solution {
public:
    double caculatePow(double x, int n) {
        if(n == 0)
            return 1;
        if(n % 2 == 0)
            return caculatePow(x*x, n/2);
        return x*caculatePow(x*x, n/2);
    }
    double myPow(double x, int n) {
        if(x == 0)
            return 0;
        if(n == 0)
            return 1;
        if(n < 0) {
            return caculatePow(1/x, -n);
        }
        return caculatePow(x, n);
    }
};
```

代码2:

```
double myPow(double x, int n) {  
    double res = 1;  
    unsigned long long p;  
    if(n == 0) return 1;  
    if(n < 0) {  
        p = -n;  
        x = 1 / x;  
    }else {  
        p = n;  
    }  
    while(p) {  
        if(p & 1) res *= x;  
        x *= x;  
        p >>= 1;  
    }  
    return res;  
}
```
