

152. Maximum Product Subarray

题目描述: <https://leetcode.com/problems/maximum-product-subarray/>

给定一个数组，求出这个数组中连续子序列乘积最大值。

例如:

```
[2,3,-2,4]
```

返回:

```
6
```

解题思路:

动态规划，用一个最大值的数组和一个最小值的数组来记录。因为有可能有负数~

代码:

```
class Solution {
public:
    int maxProduct(vector<int>& a) {
        vector<int> f(a.size(), 0);
        vector<int> fm(a.size(), 0);
        for(int i = 0; i < a.size(); i++){
            f[i] = a[i];
            fm[i] = a[i];
        }
        for(int i = 1; i < a.size(); i++){
            f[i] = max(f[i], f[i-1]*a[i]);
            f[i] = max(f[i], fm[i-1]*a[i]);
            fm[i] = min(fm[i], fm[i-1]*a[i]);
            fm[i] = min(fm[i], f[i-1]*a[i]);
        }
        int m = INT_MIN;
        for(int i = 0; i < a.size(); i++){
            m = max(m, f[i]);
        }
        return m;
    }
};
```
