

## 338. Counting Bits

### 题目描述

述: <https://leetcode.com/problems/counting-bits/>

给定一个数num，求从0 到 num每一个数字对应的二进制数中1的个数

例如：给定数字为5

```
[0,1,2,3,4,5] -> [0,1,1,2,1,2]
```

### 解题思路：

观察规律

0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15

0, 1, 1, 2, 1, 2, 2, 3, 1, 2, 02, 03, 02, 03, 03, 04

### 代码：

```
class Solution {
public:
    vector<int> countBits(int num) {
        vector<int> res(num+1, 0);
        if(num <= 0)
            return res;
        for(int i = 1; i <= num; i++){
            int x = log(i)/log(2);
```

```
        int y = pow(2,x-1);
        int d = i-y*2;
        if(d < y)
            res[i] = res[d+y];
        else
            res[i] = res[i-y] + 1;
    }
    return res;
}
};
```
