## 101. Symmetric Tree

## 题目描述: https://leetcode.com/problems/symmetric-tree/

```
判断一棵二叉树是不是左右对称的,包括节点的val。
例如:对称二叉树
```

```
1
/ \
2 2
/ \ / \
3 44 3
```

非对称二叉树

## 解题思路:

递归判断

## 代码:

```
* Definition for a binary tree node.
* struct TreeNode {
     int val;
     TreeNode *left;
     TreeNode *right;
      TreeNode(int x) : val(x), left(NULL), right(NULL) {}
* };
 */
class Solution {
public:
   bool isSymmetric(TreeNode* root) {
       if(root==NULL)
           return true;
       return isSameTree(root->left, root->right);
   }
   bool isSameTree(TreeNode* p, TreeNode* q){
       if(p==NULL&&q==NULL)
           return true;
       if(p==NULL&&q!=NULL)
           return false;
       if(q==NULL&&p!=NULL)
           return false;
       if(p->val != q->val)
           return false;
       return isSameTree(p->left, q->right)&&isSameTree(p->right,q->left);
};
```
