70. Climbing Stairs

题目描述: https://leetcode.com/problems/climbing-stairs/

给定一个阶数为n的梯子,每次能爬1-2级,求有多少种爬梯子的方案

解题思路:

```
经典的动态规划问题。
递推方程为:
f[n] = f[n-2]+f[n-2], n > 2
f[n] = n, n <= 2
```

代码:

```
#include <vector>
class Solution {
public:
    int climbStairs(int n) {
        vector<int> v(n+1,0);
        v[1] = 1; v[2] = 2;
        for(int i = 3; i <= n; i++){
            v[i] = v[i-1]+v[i-2];
        }
        return v[n];
    }
}</pre>
```
