205. Isomorphic Strings

题目描述: https://leetcode.com/problems/isomorphic-strings/

```
给定两个字符串,判断时候可以通过替代s中的一下字符使其达到t,反之也必须成立例如:
Given "egg", "add", return true.
Given "foo", "bar", return false.
Given "paper", "title", return true.
```

解题思路:

哈希表。

代码:

```
class Solution {
public:
   bool isIsomorphic(string s, string t) {
       map<char, char> m;
   for (int i = 0; i <= s.size(); i++){
       if (m.count(s[i]) == 0)
           m.insert(pair<char, char>(s[i], t[i]));
        else if (m[s[i]] == t[i])
           continue;
        else
           return false;
   }
   m.clear();
   for (int i = 0; i <= s.size(); i++){
       if (m.count(t[i]) == 0)
           m.insert(pair<char, char>(t[i], s[i]));
        else if (m[t[i]] == s[i])
           continue;a
        else
           return false;
   }
   return true;
};
```
