242. Valid Anagram

题目描述: https://leetcode.com/problems/valid-anagram/

```
给两个字符串,判断其中对应字母的个数是否相等例如:
s = \text{"anagram"}, \ t = \text{"nagaram"}, \ \text{return true}.
s = \text{"rat"}, \ t = \text{"car"}, \ \text{return false}.
```

解题思路 1: (很慢的map)

使用两个map分别存储两字符串中每个所含字符,判断两个map是否相等

代码 1: 很丑! 极其不推荐

```
#include <map>
class Solution {
public:
    bool isAnagram(string s, string t) {
        if(s.size() != t.size())
            return false;
        map<char, int> ss, tt;
        for(int i = 0; i < s.size(); i++){</pre>
            ss[s[i]] ++;tt[t[i]]++;
        if(ss.size() != tt.size())
            return false;
        map<char, int>::iterator it1,it2;
        it1 = ss.begin(); it2 = tt.begin();
        for(; it1 != ss.end();)
            if(it1->first!=it2->first || it1->second != it2->second)
                return false;
            it1++;it2++;
        return true;
};
```

解题思路 2:

使用哈希表

代码 2:

```
class Solution {
public:
    bool isAnagram(string s, string t) {
        int a[26] = {0};
        int b[26] = {0};
        if(s.size() != t.size())
            return false;
        for(int i = 0; i < s.size(); i++)
        {
            a[s[i]-'a'] ++;
            b[t[i]-'a'] ++;
        }
}</pre>
```

```
for(int i = 0; i < 26; i++)
{
      if(a[i] != b[i])
      return false;
}
return true;
}</pre>
```
